

STRIDE I

Includes UC and CD Target recommendations:

- UC: was clinical/PRO remission, defined as no rectal bleeding and diarrhea, and endoscopic remission (Mayo of 0–1). Histological remission was considered as an adjunctive goal.
- CD: Clinical/PRO remission and defined as resolution of abdominal pain and diarrhea/altered bowel habit; and endoscopic remission, defined as resolution of ulceration at ileocolonoscopy, or resolution of findings of inflammation on cross-sectional imaging. Biomarker remission (CRP and FC) considered as adjunctive target.

STRIDE- II: (2021)

Added absence of disability/restoration of quality of life/normal growth in children
